WWW Resolved

Warning! WWW Redirection.

This parameter assesses whether your website re-directs to the same page with or without WWW (World Wide Web). It is better and more convenient for users when it does.

Ip Canonicalization

yes

When a search engine spider indexes a website, it gathers as much information about the website as possible. This may also include the IP address. Why is that a problem? For starters, if you have multiple domain names under one IP address, the search engine could possibly label one URL of the websites as duplicate content.

Robots.txt

<https://fire.smartumc.com/robots.txt>

When a search engine crawler comes to your site, it will look for a special file on your site. That file is called robots.txt and it tells the search engine spider, which Web pages of your site should be indexed and which Web pages should be ignored. The robots.txt file is a simple text file, that must be placed in your root directory.

Sitemap

No

Sitemaps are a way to tell Google about the pages on your website. In its simplest terms, an XML Sitemap is a list of the pages on your website. Creating and submitting a Sitemap helps make sure that Google knows about all the pages on your site, including URLs that may not be discoverable by Google's normal crawling process.

	View more					

Heading Tags are used in order to provide your visitors with a clear view about the content's importance.

✓ Image ⚙️ ⚙️ ⚙️	We have found total 2 Images alt attribute for 0 image(s) is missing.
	View more

Alternative text describes your images so they can appear in Google™ Images search results also be cached by the Search Engine bot as they cannot read images.

✗ Text to HTML ⚙️ ⚙️ ⚙️	0.63%

The text and HTML ratio of your website should be ideally 25 to 75 percent.

✓ Flash ⚙️ ⚙️ ⚙️	No

Although Flash content often looks nicer; search engines cannot properly index it. Avoid full Flash websites to maximize SEO.

✓ Iframe ⚙️ ⚙️ ⚙️	No

Avoid frames whenever possible and use a NoFrame tags if you must use them.

✓ Page Links ⚙️ ⚙️ ⚙️	We found a total of 2 link(s)
	
	External Links: doFollow (0.00%)  External Links: noFollow (0.00%)  Internal Follow Links (100.00%) 

These are the links pointing to other websites from your website. You should always Limit the number of external links on a page to 10. Use No Follow to optimize the juice that you want to pass to each link.

Favicon

☒ Favicon Found

Favicon is an icon associated with a particular website, typically displayed in the address bar of a browser accessing the site. One should make sure this favicon is consistent with your brand.

Print CSS

No

Tests whether or not pages are designed to be printed. It takes care of a common "exit strategy" of users printing the information and leaving the website. Many webpages don't print well, or at all, potentially costing a website a prospect or sale.

Open Graph

No

Open Graph is a term created by Facebook developers to describe the ability for some social networking software to interact across different platforms. This allows different websites and applications to share information about a user, their interests and even their friendship network.

W3C Validation

No

Check the markup validity of Web documents in HTML, XHTML, SMIL, MathML, etc. A basic check every website needs to go through.

SSL Enabled

Yes

SSL helps to secure the transfer of information to your page and is used as a ranking signal by Search Engines.

Spelling Mistakes

No data found for this domain.

Silly spelling errors can be embarrassing. Check if there are any on your website.
